

Jackson Piet

Oak Ridge, TN • 865.207.3999 • jacksonpiet13@gmail.com

Associate Software & Systems Specialist

Recent Computer Science graduate with hands-on experience designing containerized platform microservices, AI computational workflows, hardware-accelerated computer vision pipelines, and Linux virtualization environments. Proven ability to configure custom APIs, optimize edge-device inference, and manage site-level IT infrastructure. Seeking to leverage skills in software development, Linux systems, containerization, and edge AI workloads.

SKILLS

- **Microservices & Containerization:** Docker Compose, LXC Container, Proxmox VE, Portainer
- **AI & Edge Computing:** Hardware Acceleration (NVIDIA CUDA/Jetson, Intel QuickSync), Computer Vision (RetinaFace, InsightFace, YOLO)
- **Programming & Web Development:** Python, Java, SQL, REST APIs, GUI Development (PyQt/Tkinter)
- **Operating Systems & Networking:** Linux, Windows, Network Analysis (Wireshark/Nmap), Remote Troubleshooting, Active Directory
- **Tools & Platforms:** Git, Github, ManageEngine MDM, VS Code, Linux CLI

PROJECTS

Self-Hosted Containerized AI Platform & Media Infrastructure 08/2025 - Present

- Architected and deployed a multi-container edge AI surveillance workflow using Docker Compose on Linux Virtual Machines, integrating Frigate with NVIDIA JetPack 5 for real-time hardware acceleration.
- Engineered a custom Python container leveraging InsightFace model images to replicate DeepStack facial recognition pipelines, routing event webhooks via DoubleTake.
- Configured a high-availability Proxmox VE server hosting unprivileged LXC containers to run isolated media services (Jellyfin, Radarr, Sonarr, etc.), leveraging Intel QuickSync GPU pass-through for hardware transcoding.
- Managed container networking, local network storage volumes, environment variables, and automated service orchestration across virtualization layers.

5G Lab AI & Computer Vision Research Intern 01/2025 - 08/2025

University of Tennessee Research Triangle

- Implemented and modified open-source object detection and facial recognition models (YOLOv7, RetinaFace) using Python.
- Adapted GitHub open-source codebases to build custom data-processing scripts and conducted local evaluations of computational workloads.
- Developed a basic graphical user interface (GUI) using PyQt to streamline user interaction with the computer vision pipeline.

WORK EXPERIENCE

National Fitness Center

05/2025 – Present

IT Specialist (Sole Regional Technician)

TN

- Maintain infrastructure stability and hardware uptime for 1000+ regional endpoints, serving as the primary regional technician across 7 Tennessee locations, supporting 200+ staff and 10,000+ members in coordination with enterprise system admins.
- Configure and deploy domain-standard end-user devices (PCs, laptops, tablets, VoIP phones) while managing employee directory profiles via Active Directory and ManageEngine Mobile Device Management (MDM) platforms.
- Perform remote and on-site network diagnostics, CCTV installation and maintenance, and hardware troubleshooting to maintain operational continuity.

Montara Boats

09/2020 – 02/2024

Team Lead / Warranty Admin

Loudon

- Maintained central databases for tracking \$45M+ in vessel inventory and customer accounts while compiling operational performance and financial analytics reports.
- Led manufacturing and quality-control operations in a large-scale industrial environment.

Ruby Tuesday

05/2019 – 09/2020

Manager

Lenoir City

- Supervised daily operations and staff, managed financial transactions, and resolved high-priority operational issues.

EDUCATION

BS in Computer Science

Western Governors University

10/2025 – 08/2026

Awards:

- Advanced Java Excellence Award

AAS in Computer Information Technology: Cyber Defense

Roane State Community College • GPA: 4.0

01/2023 – 05/2025

Awards:

- Computer Information Technology Award
- Academic Achievement Award
- Beulah Davis Outstanding Writer Award
